PhD position in developmental physiology in the Department of Botany and Plant Biology at the University of Geneva, Switzerland.

The group of Marie Barberon at the University of Geneva is looking for a PhD student to join our research on nutrient transport and root development. The project will integrate different approaches including cell biology, genetics, development and ionomics in order to visualize and decipher the function and regulation of suberin in roots.

The candidate should hold a master degree in biology and have research experience in a research laboratory. Experience in plant molecular biology is expected. Prior experience in molecular cloning and/or confocal microscopy will be an asset. Excellent English communication skills are expected.

PhD students will be embedded into the Molecular Bioscience program of the University of Geneva International PhD program in Molecular Biosciences.
